

Production engineer

Do you want to work on the production of high-tech and sustainable solar-powered products? We are looking for a part-time production engineer that doesn't mind getting dirty hands, but also has the skills to work with delicate components. You are accurate, work neatly, and able to deliver high quality products. The tasks are diverse and you will have the opportunity to give input on the optimisation of our production processes.

FlexSol Solutions is a young, high-tech company located on the TU campus. We make various innovative solar powered products, such as autonomous light poles and solar roof tiles.

Are you interested in joining our team? Let us know!

What will you do?

You will be part of the production team and are responsible for delivering high-end products. This will include:

- Proces optimization
- Production management
- Component production
- Product assembly

Your profile

You are practical and will go the extra mile to deliver the highest quality. You are independent and like to take initiative. You enjoy an informal work atmosphere. Your qualifications:

- Hands-on mentality
- Problem solver
- Experience with production processes
- Technical background
- Preferably fluent in English & Dutch

Interested?

Send an e-mail to info@flexsolutions.com with your CV and letter of motivation!
